Ceiling Fans –
The Right Model For Every Room

Low Ceilings

In rooms with low profile ceilings, only flat ceiling fans or models without a down rod (hugger) should be installed.

Standard Ceilings

In rooms with a ceiling height of 2,50 meters, all ceiling fans can be installed with or without a down rod, as well as with an extension rod.

For rooms up to:	12 sqm	Use 76cm - 90cm ceiling fans.
For rooms up to:	15 sqm	Use 105cm ceiling fans.
For rooms up to:	20 sqm	Use 112cm - 122cm ceiling fans.
For rooms up to:	25 – 30 sqm	Use 132cm ceiling fans and larger.
For rooms bigger than:	30 sqm	The use of more than one ceiling fan is recommended.

High Ceilings

In rooms with high ceilings, ceiling fans should be installed with an extension down rod.

Angled Ceilings

In rooms with angled ceilings, ceiling fans should also be installed with an extension down rod (using a remote control limits the tilt angle).

Summer and Winter Operation of a Ceiling Fan

Ceiling area

26°C – 24°C

Center of the room

24°C – 25°C

Bottom room area

22°C – 24°C

Winter mode: goodbye to cold feet

In winter mode, Westinghouse ceiling fans are switched to the clockwise direction. As a result, the warm air that collects near the ceiling is distributed evenly throughout the room, and cold spots and drafts are eliminated. It dramatically increases your comfort level without raising the temperature - and it means big savings on heating costs.

Ceiling area
30°C – 25°C

Center of the room
29°C – 25°C

Bottom room area
28°C – 25°C
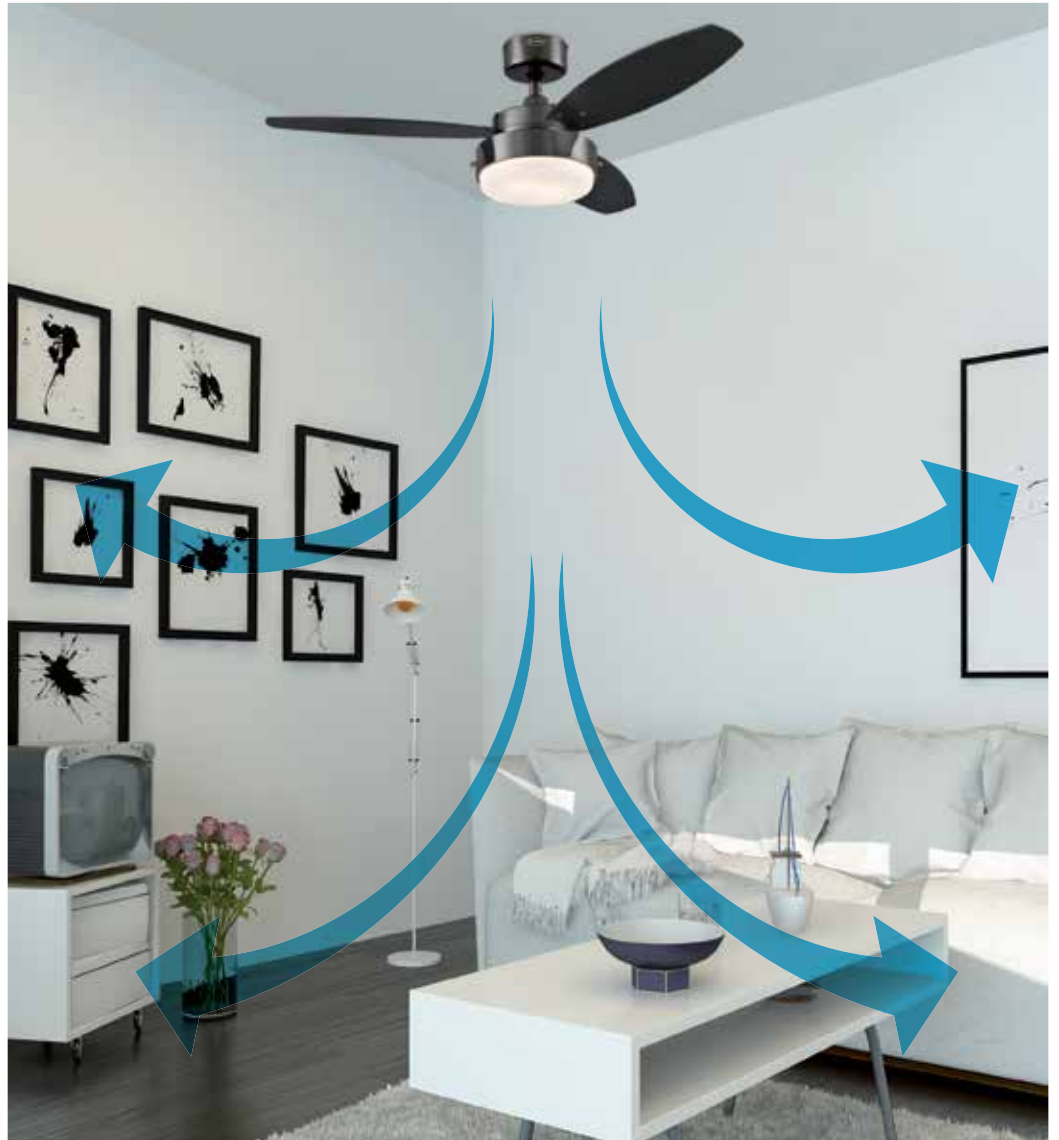

Summer mode: a pleasant, gentle breeze

In the summer, Westinghouse ceiling fans keep your home pleasantly cool; the ceiling fan runs in reverse, in other words counterclockwise. It sets the air in motion, and the airflow creates evaporation chill on your skin. That means even when the weather is hot, the indoor temperature feels pleasant.

Save Energy with Ceiling Fans

save energy

Households use a lot of energy: to light up our own four walls, for electrical appliances, for heating in the winter and cooling in the summer - which puts a strain on the climate as well as our purses. That is why Westinghouse is developing ceiling fans to help protect our available resources. Most of the models only use less power as a 100-watt light bulb to protect our environment and your wallet in the long term.

The right size is important

In order to ensure completely energy-efficient operation, make sure the size of the ceiling fan is appropriate for the size and height of your room. If the ceiling fan is too small for the room, it has to run at a higher speed in order to be effective. That wastes energy.

Modern DC motors are more economical

Westinghouse is setting new quality standards: The FANtastic, Delancey and Lenerco models already come equipped with an economical DC motor.
You save up to 65% on operating costs compared to an AC motor, and you can choose from 6 speeds instead of 3.
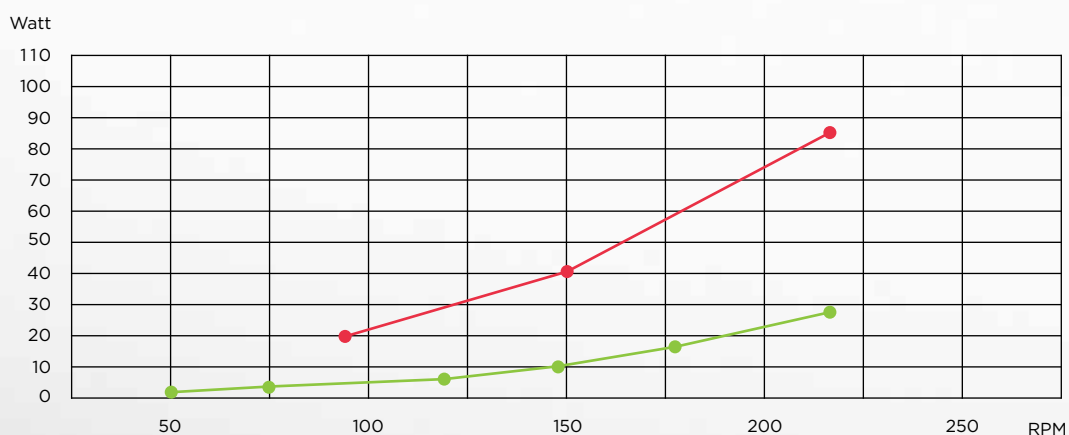

Fast, quiet and long-lasting

Because of its larger diameter, the modern DC motor has a higher torque in the magnetic field. That means it reaches the necessary speed faster than a conventional motor, and it is extremely balanced and quiet despite the higher output. There is no compromising on quality, either: we provide our standard 10-year guarantee for the DC motors as well.

Retrofitting ceiling fans with LED technology

The use of modern LED lamps means energy savings of up to 90% compared to conventional light bulbs. Replace a 40-watt, 600-lumens bulb with a 7.7-watt LED lamp and save cash. See for yourself:

Ø Average working life per day per annum	Costs per year: Light bulb	Costs per year: LED	Saving per year
2h	7,18 €	1,15 €	6,03 €
5h	19,65 €	3,78 €	15,87 €
8h	31,50 €	6,05 €	25,45 €

(Basis of calculation: 27.30 Cent per kWh, Status January 8th 2014, Source Verivox.de)

Rely on LED technology for your new purchases

The new Westinghouse ceiling fans, the FANtastic, Athena and Hercules Supreme, come factory-equipped with LED lamps. At just 17.5 watts, they are very economical. In addition, 1200 lumenss and 2700 Kelvin provide a very pleasant light. Some other advantages of LED lights:

✔ No warm-up time - bright light, instantly
✔ Long lifespan
✔ Many switching cycles
✔ No harmful materials (no hazardous waste removal required)
✔ Low heat generation

We use the following symbols to indicate the most important energy-saving features:

LED integrated LED illumination

*2-installation system:
The rod included in the package can be left out in order to reduce the distance between the ceiling and the bottom end of the lamp or blades. This is recommended in rooms with low ceilings, for instance.

**Intermediate rod only:
During installation, be sure to use the intermediate rod included in the package. Depending on the model, you can also use a 12"/30.5 cm or 18"/46 cm extension rod.

A. Ceiling to bottom of blade
B. Ceiling to bottom of switch housing
C. Ceiling to bottom of canopy
D. Width of motor housing
E. Width of canopy
F. Ceiling to bottom of light kit
